The Eurospan® product

Welcome to the next innovation in architectural design; Eurospan[®]. Rather than a distracting acoustic panel on a wall or ceiling, Eurospan[®] replaces the wall and ceiling entirely, and with only three components.

Our flexible track system first mounts onto the surface the project is covering, followed by installing the selected acoustic core for the job. Lastly, a fabric finish spans across the entire surface, neatly tucking into the tracks.

Eurospan[®] can be made into a seamless smooth white ceiling, or made into a space's centerpiece draped in designer fabrics. Our unique acoustic stretch fabric system allows architects to design acoustic solutions themselves, without increasing the workload for installers.

See page 23 for product data.

The President of the school wanted a ceiling that cut out the noise but didnt take away from the classical architecture of the building.

TRASH

A versatile track system

Our Eurospan® track system comes in four primary parts; Perimeters, Midseams, Outside Corners, and Edge Wraps, each offering different sizes and dimensions to your project. Thanks to this combination, Eurospan® installations can cover more than square or rectangular surfaces, and extend past the width limits of rolls of fabric.

Creative uses of track

Eurospan® doesn't stop at two dimensional projects. Track pieces can run great distances being gently curved to form wave-like monoliths, or wrap around corners to add more size and depth to a room. Eurospan® is all about giving more potential to acoustic solutions, not limiting them.

EuroEco Core was used to meet the environmental standards in this public space.

Lake Forest Civic Center Lake Forest, CA

The acoustic core

Our products all go through ASTM C423 tests in a certified NVLAP accredited laboratory, to ensure accurate NRC ratings. In other words, our acoustic cores *will* perform exactly as they say on paper. These cores, coming in three options and multiple thicknesses, are what gives Eurospan[®] the world-class performance you'd expect from a world-class acoustic solution.

If your project has rigorous environmental-impact needs, our EuroEco Cores are LEED® certified, having no added formaldehyde.

The finishing touch

Every project spec is different, which is why we offer thousands of fabrics for our products. We are always in close communication with our fabric suppliers, coming up with new ways to make your projects look their best, while still performing their best.

Our stock options and partnered suppliers are ready with acoustically-transparent finishes; many of which available in our Quick Ship program. If you'd like to see some swatches in person, reach out and ask!

Want a more custom finish for your project? We can print directly onto select fabrics.

Mounting

Walls: Square, bevel, radius perimeter track or square, bevel, radius mid joint track.

Ceilings: Square perimeter track and square fine line or reveal mid joint track.

Max sizes

Spaces of 16' x 40' or more can be covered seamlessly. Larger areas can be seamed almost invisibly or installed with reveals to highlight the edges.

Edge details

Eurospan® has a monolithic surface which merges unobtrusively with the room's interior design. Larger areas can be seamed almost invisibly or installed with reveals to highlight the edges.

* Conwed products meet or exceed ASTM E84 standards for smoke development and flame spread on a component level.

Certified installers

Installers aren't required to be certified to work with our products. However, we offer a free Eurospan Certified Installer program covering all the tricks to mounting, installing, and finishing a Eurospan[®] project as efficiently as possible. Reach out to your local rep to learn more about how you and your team can become certified!
