

Eurospan PRIME

Eurospan

A stretch fabric acoustic system that can replace entire ceilings. A single length of fabric can cover an entire surface, offering a smooth drywall look, while the acoustical transparency allows unwanted noise to pass through and be absorbed by the hidden acoustic core installed in the system.

Eurospan Prime fabric

Designed in-house specifically for the Eurospan Ceiling System, this textile has an ideal lock knit structure and weight for easy installation and opaqueness for minimal shadowing.

Technical data

Property	Value
Fiber content	100% Polyester fiber
